

Lab 01

Team:

Allen Yu

Initial Decision:

Worked with python as it is the most familiar language

Used code vs

Chosen Architecture:

Used class objects to store data to make it easier to keep track of variables and make it easier to call. Using the input from a user the program uses a search function and returns data associated with the entry. Users are asked to enter options one at a time in an attempt to prevent erroneous entries.

Task Log:

Allen Yu - coding, write-up, etc - roughly 6 hours

Notes on testing: I was unsure of how to create a test suite using the given example. I ran out of time to make proper test cases for the program.

Final notes:

Having examples of expected output in the lab would help. I should've found a partner to split the work but should try to work in a team next lab.
